- Questions?
- Did it work?
- Were you able to collaborate?

• What is the difference between classification and regression? <sup>9</sup>

# Regression to Classification 🤔 🤔

Assume that we have a function that outputs a score for every class, e.g. Predict sentiment into (positive, negative, neutral):

$$(15.0, -2.3, 4.1)$$

• How do we use this for classification?

• What is the difference between classification and regression? <sup>9</sup>

## Regression to Classification 🤔 🤔

Assume that we have a function that outputs a score for every class, e.g. Predict sentiment into (positive, negative, neutral):

$$(15.0, -2.3, 4.1)$$

- How do we use this for classification?
  - Argmax

• What is the difference between classification and regression? <sup>9</sup>

## Regression to Classification 🤔 🤔

Assume that we have a function that outputs a score for every class, e.g. Predict sentiment into (positive, negative, neutral):

$$(15.0, -2.3, 4.1)$$

- How do we use this for classification?
  - Argmax
- Can we get a probability distribution?

• What is the difference between classification and regression? <sup>9</sup>

## Regression to Classification 🤔 🤔

Assume that we have a function that outputs a score for every class, e.g. Predict sentiment into (positive, negative, neutral):

$$(15.0, -2.3, 4.1)$$

- How do we use this for classification?
  - Argmax
- Can we get a probability distribution?
  - Softmax:  $\frac{\exp x_i}{\sum_{i} \exp x_k}$
